Food Guidance

Food allergies / intolerances: penatus

Reported reactions: no

Doctor's food restrictions: yes

Lifestyle Recommendations

Daily routine: Use a stable wake, meal, and wind-down schedule that fits your current daily commitments. Adjust for work, caregiving, symptoms, and doctor instructions; do not use this as treatment.

Meal timing: Keep meal timing regular and choose meal size based on comfort and digestive tolerance rather than forcing fasting or restriction.
This is not a diet plan and does not override Agent 2, allergies, conditions, or doctor restrictions.

Sleep: For your reported sleep pattern (Good), record bedtime, waking and interruptions, and choose one tolerable wind-down step to review with the doctor.

Seek clinical assessment for severe, persistent, or safety-critical sleep problems.

Physical activity: Choose gradual, comfortable activity with rest and hydration appropriate to your capacity.

Stop and seek clinician guidance for pain, dizziness, severe breathlessness, pregnancy-related restrictions, or condition-specific limitations.

Stress management: For the reported stress level (Moderate), place a brief quiet pause before the daily activity you find most demanding and record whether it is tolerable.

Do not use this in place of mental-health, emergency, or medical care.
